Jack Harrison

Grading Report

Accelerate People: Level 4 End-point Assessment for Data Analyst ST0118/AP03

QAN: 610/2052/7

Classification: Confidential

Result Statement

Apprentice Information

Apprentice Name	Jack Harrison
ULN	1935743723
Employer	Travis Perkins
Employer Address	Ryehill House, Rye Hill Close, Lodge Farm Industrial Estate, Northampton, , Northampton, United Kingdom, NN5 7UA
Employer Point of Contact	Bez Noferesti
Training Provider	Multiverse
Reasonable Adjustments	Not Requested

Assessment Method Grades

Assessment Method	Assessment Date	Fail	Pass	Distinction
AM1: Project with presentation and questioning	09-04-2026	☐	☐	☒
AM2: Professional discussion with portfolio	09-04-2026	☐	☐	☒

Overall EPA Grade

Fail	Pass	Merit	Distinction
☐	☐	☐	☒

Live Assessment

Apprentice Preparation	Yes	No	Details
Presented appropriate ID.	☒	☐	—
Had a copy of their digital portfolio with them.	☒	☐	—
Had a copy of their project with them.	☒	☐	—
Was aware of EPA rules as stipulated in EPA Live Examination Guidance.	☒	☐	—

Apprentice Preparation	Yes	No	Details
Submitted evidence only related to the assessment method it was relevant to. (i.e. the portfolio only contained evidence for AM2)	☒	☐	—

Assessment Session	Yes	No	Details
Technical issues.	☐	☒	—
Other issues	☐	☒	—
Early termination of EPA.	☐	☒	—

Grading Criteria

AM1: Project with Presentation and Questioning

Associated KSB	Pass Criteria	Criteria Not Met
B4	Acts independently to establish logical and analytical solutions such as exploring new data sets or resolving issues within the data.	☐
S4	Analyses data sets taking account of different data structures and database designs.	☐
S12	Communicates and collaborates with all relevant stakeholders and adapts communication style to meet audience and situational requirements.	☐
S3	Demonstrates a reasoned application of the principles of data classification. Explains where any flexibilities in application have been applied and their purpose.	☐
S8	Demonstrates how data from different sources is combined and prepared for data analysis setting out how they identified the risks and challenges inherent in combining data within the project.	☐
K4	Describe the principles of data including open, public, administrative and research data and how they relate to the data used within the project.	☐
B3	Describes how they work independently and collaboratively detailing their impact on the work of others.	☐
K11, S15	Describes the tools and methods used by their organisation for data analysis and identifies which were used within the project with reasoning for the choices made to achieve the best outcome.	☐
S6, K8	Identifies quality risks in data analysis and outlines methods to mitigate, escalate and/or resolve them.	☐
S1	Operates data systems in compliance with all organisational and legislative requirements including principles of Privacy by Design.	☐

Associated KSB	Pass Criteria	Criteria Not Met
S7, K9	Outlines and applies the principles for defining customer requirements and implements findings in data analytics planning and outputs.	☐
S2, K3	Outlines and applies the principles of data analysis lifecycle to the steps of data analysis.	☐
K12	Outlines the choice of organisational data architecture.	☐

Associated KSB	Distinction Criteria	Criteria Not Met
S7	Analyses the requirements of the customer to produce a data analysis plan which provides an optimum solution.	☐
S4	Demonstrates the use of data sets with different data structures and data-base designs to solve problems or improve the accuracy or efficiency of data analysis.	☐
B4, K11, K8	Evaluates the outcomes of data analysis and suggests alternative tools/methods which would be of benefit to all stakeholders.	☐

AM2: Professional Discussion with Portfolio

Associated KSB	Pass Criteria	Criteria Not Met
S14	Demonstrates data analysis activities involving the collation and interpretation of qualitative and quantitative data and displays results using visual representations.	☐
B2	Describes how they have appropriately adapted their activities to meet minor, unexpected changes at work.	☐
B5	Describes how they have ensured the true root cause of any problem is found and a solution is identified which prevents recurrence.	☐
S5	Describes impact on user experience and domain context on data analysis.	☐
K6	Describes the fundamentals of data structures and database system design and explains how they are implemented and maintained.	☐
S9	Describes the relevant tools or techniques used for working with the data systems architecture in their organisation.	☐
S10, K13	Explains and applies the principles of statistics for analysing datasets.	☐
K10	Explains approaches to combining data from different sources to improve accuracy and / or efficiency and / or maximise benefits to the organisation and / or customer.	☐
K1, B1	Explains how current, relevant legislation impacts on the safe use of data and how their role contributes to a productive, safe, and secure working environment.	☐

Associated KSB	Pass Criteria	Criteria Not Met
S13	Explains how they have applied analytical techniques for data mining and time series forecasting and other modelling techniques.	☐
K5	Explains the differences between Structured and Unstructured data.	☐
K15	Explains the ethical aspects associated with the collation and use of data and justifies why this is important.	☐
S11, K14	Explains the principles of descriptive, predictive and prescriptive analytics and demonstrates how they have been applied within their own data analysis practice.	☐
K7	Explains the principles of user experience and domain context for data analytics.	☐
K2	Explains the relevant data policies and procedures for the organisation, and identifies the data standards to be reached.	☐
B6	Identifies and explains challenges in their work and how they overcame them, providing an outline of lessons learned.	☐
B7	Identifies areas of work where they adapted to changing contexts within the scope of a project, direction of the organisation or Data Analyst role.	☐

Associated KSB	Distinction Criteria	Criteria Not Met
S14	Compares and contrasts visual data representation approaches and how they aid understanding by stakeholders.	☐
S11, K14	Critically evaluates the risks and benefits of predictive analytics.	☐
K10	Evaluates the benefits and risks inherent in combining data from different sources.	☐

Personalised Feedback

AM1

Project word count: Within prescribed limits

Strengths

Jack demonstrated a clear understanding of project context and its alignment with business needs, effectively applying recognised analytical frameworks to guide his approach. His presentation and communication were professional, supported by a high standard of written work and well-prepared materials. Jack showcased a strong grasp of GDPR principles, ensuring data was used lawfully, fairly, and securely in compliance with both organisational and legislative requirements.

He effectively applied data preparation techniques, including SQL queries, Left Joins, and scheduling table refreshes, to cleanse and transform data for analysis. Jack identified and justified the use of organisational tools such as Big Query, Google Sheets, and Looker Studio, selecting them based on accessibility, ease of use, and alignment with organisational needs. His independent problem-solving skills were evident in his automation of tasks using FILTER and TOCOL functions in Google Sheets and his use of correlation analysis to validate a pricing strategy.

Jack demonstrated the ability to identify and implement customer requirements through stakeholder meetings and the application of the Data Analytics Life Cycle, ensuring outputs were aligned with business needs. He applied data classification principles by segmenting data access based on business requirements, ensuring appropriate and secure use of data. His communication of findings through Looker Studio dashboards and weekly emails ensured stakeholders were consistently informed of progress and outcomes.

Jack's ability to engage with multiple stakeholders and tailor communication methods, such as weekly emails and dashboards, further demonstrated his commitment to meeting diverse stakeholder needs.

Development Opportunities

Jack could benefit from refining his time management during presentations, as his recent presentation exceeded the allocated duration. Incorporating time markers could help him stay within the set limits. Additionally, exploring programming tools such as Python or Power BI could broaden his technical skill set, even if these tools are not currently utilised within his organisation. Finally, developing a deeper level of reflection and evaluation in his project work would further enhance the quality and depth of his outputs.

AM2

Strengths

Jack demonstrated a comprehensive breadth of portfolio evidence, showcasing technical proficiency across a range of analytical tools, including Big Query, Google Sheets, and Looker Studio, which were effectively integrated within organisational systems. He displayed strong communication skills and composure. Jack's dashboards were designed with user experience principles in mind, incorporating consistent structures, appropriate colour schemes, and considerations for visual impairments to enhance engagement and accessibility.

Jack effectively applied statistical principles, including descriptive and inferential methods, to analyse datasets, providing practical examples such as hypothesis testing and RMSE calculations. He demonstrated advanced knowledge of data joining techniques, such as left joins and VlookUp, and evaluated the associated benefits and risks, including performance issues and data duplication. Additionally, he showcased proficiency in predictive and prescriptive analytics, using historical data to forecast trends and provide actionable recommendations while accounting for external factors like seasonality.

Jack exhibited a strong understanding of GDPR and organisational policies, implementing measures such as two-factor authentication and secure device handling to ensure data safety and compliance. He also identified and resolved root causes of data discrepancies by implementing solutions like joining datasets, ensuring accuracy and building trust in data outputs.

Jack demonstrated a clear understanding of the importance of visual data representation in aiding stakeholder comprehension, using techniques such as line charts and pie charts to effectively communicate insights to both technical and non-technical audiences. He also provided clear explanations of the differences between structured and unstructured data, offering practical applications and examples. His reflective and self-aware responses further highlighted his ability to evaluate his work critically and continuously improve.

Development Opportunities

Exploring additional data visualisation techniques, such as heatmaps or scatter plots, could further enhance the variety and depth of insights Jack presents in dashboards. The time series forecast could benefit from the inclusion of visualisations and the application of more advanced techniques. Expanding on the use of inferential statistics by incorporating methods like ANOVA or regression analysis would deepen Jack's analytical capabilities. Additionally, enhancing the explanation of prescriptive analytics with more detailed examples of how recommendations were implemented and their impact on decision-making would provide greater clarity and context.

Distinction Focus

AM1:

Jack adopted a structured approach to his project, ensuring thorough planning and following each stage of the Data Analytics Lifecycle. He prepared and quality-checked his data effectively and combined datasets to create a comprehensive view for analysis. He demonstrated greater depth by suggesting alternative advanced tools, such as Python or Power BI, which could provide enhanced insights for stakeholders.

AM2:

Jack demonstrated a clear understanding of the business implications of poor data quality and the importance of cleaning and standardising data prior to combining it. He also showed awareness of using appropriate metrics to ensure model accuracy. He demonstrated strong customer focus through his application of user experience principles, creating visualisations tailored to stakeholders' specific needs and informed by his domain knowledge.
